

The LOU Growth Program

Data-driven marketing for pool, spa & hot tub dealers • An Evosus × Small Screen Producer partnership

The vision. Every completed order in LOU is a marketing moment. The LOU Growth Program connects LOU's customer and transaction data to Small Screen Producer's marketing engine so those moments become automatic revenue for dealers — with every campaign measured against real orders in LOU, not clicks.

How the partnership works

Dealer

- Enrolls free; authorizes secure data sharing
- Gets managed lifecycle campaigns
- Sees attributed revenue monthly

Evosus

- Builds APIs & enrollment in LOU
- Refers dealers to the program
- Gains LOU differentiation + referrals of non-LOU dealers

Small Screen Producer

- Strategy, creative, execution, optimization
- Compliance & reporting handled
- Refers pool/spa businesses to LOU

The campaign portfolio — triggered by LOU order activity

- 1. Welcome Splash** — first Sale order → welcome series, review capture, starter cross-sell
- 2. Complete the Backyard** — order SKUs → matched accessory bundles for big-ticket buyers
- 3. Service Excellence Loop** — Work order done → satisfaction check, reviews, service-plan upsell
- 4. Quote Rescue*** — stalled estimates → 5-touch recovery with financing framing
- 5. Water Care Autopilot** — consumable cycles → reorder reminders into LOU ecommerce

6. Season Ready — segment + calendar → early-bird openings/closings, seasonal pushes

7. Welcome Back — 12-18 mo. dormant → win-back offers and feedback ask

8. Upgrade Path — service-only customers → repair-vs-replace, showroom traffic

9. Smart Replacement* — equipment age → planned replacement before failure

** Runs when Evosus ships the quote/install-date triggers — a revenue-linked API roadmap.*

Closed-loop proof

Because orders live in LOU, every campaign is matched to subsequent orders by Customer ID. Dealers get a monthly Revenue Attribution Report — campaigns → orders → dollars. That proof is what makes the program repeatable and referable.

90-day pilot proposal

- 3-5 dealers, starting on the new orders-by-date API (late Aug)
- Weeks 1-2 onboard • 3-4 launch wave 1 • 5-12 waves 2-3 + optimize
- Targets: +50% review velocity; 3-5% dormant reactivation; ≥1 attributed order per 100 contacts/mo
- Output: joint case study that powers the referral engine

Next steps

1) Confirm interim API scope with Evosus engineering (in progress). 2) Align on this portfolio and pilot shape in the next working session. 3) Select pilot dealers jointly and start authorizations. 4) SSP builds the sync + attribution pipeline against the acceptance environment now — pilot starts the week production credentials arrive.
